

Postdoc Position in Structural and Functional Characterization of Key Multi-protein Complexes in Transcription and Repair

A postdoc position, supported by NIH funding, is available in the lab of Dong Wang at the University of California, San Diego.

Our research focuses on the interplay between two fundamental processes: transcription and DNA repair. Current research projects focus on the X-ray and CryoEM structural elucidation and functional/biochemical study of macromolecular protein-nucleic acid complexes involved in transcription, chromatin remodeling, and DNA repair. Please visit <http://pharmacy.ucsd.edu/labs/wang/publications/> for details of our recent research and publications.

We are looking for a highly motivated individual with experiences in biochemistry, and molecular biology, X-ray crystallography, or CryoEM. Candidates must have at least one original first author publication in the related field in an internationally recognized journal. We sincerely invite you join our small, but vibrant and highly productive team. Please send your CV, list of publications, and the names and E-mail addresses of 2-3 references to dongwang@ucsd.edu.
